PROFILE

Full-stack developer with a passion for the cutting edge. Previous experience includes developing generalized and highly scalable APIs for high-traffic websites as well as the infrastructure/system administration thereof. Very comfortable with web technologies, but very much a jack-of-all-(tech)-trades.

SKILL HIGHLIGHTS

Javascript, HTML, CSS, PHP, NodeJS, C, C++, C#, Objective-C, MySQL, MongoDB, Memcache, Apache, Linux, AWS (Amazon), Systems Administration

EXPERIENCE

Full Stack Developer/Co-Founder, Shnaap **Venice, CA** **2013-Present**
Core focus was backend development (LAMP) of a RESTful service supporting Shnaap's mobile app, website, and custom integrations. Set up and deployed service on both Rackspace and Amazon's EC2. Modified main website (<http://shnaap.com>) utilizing AngularJS as well as NodeJS middleware.

Development Lead/Co-Founder, Epicenter AV **Winnipeg, MB** **2011-2013**
Developed a mobile application to simplify control of AV environments, utilizing a C# backend to interface with client hardware to tune receivers and deliver content. Also developed a 3rd party API for the above allowing for digital advertisement and other custom solutions to be added via an App Store-like interface.

Web Developer, bookedIN **Winnipeg, MB** **2012**
Joined an agile-ish team to continue development on a Google AppEngine website. Instrumental in moving public-facing code off of GWT as well as general design of the API. Employed heavy unit testing and code reviews for quality control.

Further work history is available upon request, as well as information on my notable freelancing gigs. Feel free to ask me!

EDUCATION

University of Manitoba — Bachelors in Computer Science, Honours, 2012

INTERESTS AND ACTIVITIES

Volunteered to help bring two Startup Weekends to Winnipeg, including the first-ever event up there. Won a startup weekend with an apartment buzzing application idea, allowing us to progress to the Global Startup Battle, where we got completely destroyed.

I also tinker a lot with side projects. Check out <http://soupy.tv> or my homepage (<http://con.rs>) to see what I mean. If I'm not coding, I'm probably trying to surf or playing video games (currently: LoL, Halo: MCC, and Alien: Invasion).
